

Price, Utah
June 8 1960

Mr. Donald C. Norseth,
Distribution Engineer
State Engineer's Office
Salt Lake City, Utah

Dear Mr. Norseth:

Wellington Canal ~~was~~ being credited with 6.79 C F S when I first came on the job and I continued to give them that credit until the 2.30 C F S of the Snyder Ditch which had been transferred to the Wellington Canal, was purchased and point of diversion moved up the Price River.

On about June 29 1959, I received a letter from your office instructing me to deliver water as decreed and the only decree I have is the Morse Decree of 1902.

I found that Wellington Canal had 10.80 C F S 2nd class water and there was 2.20 C F S 1st class water unaccounted for in the Tidwell Canal, claimed by Wellington Canal.

As you know the Wellington Canal is an extension of the Price Canal with a Parshall Flume at its begining and that I have no control of the water except at the head of the Price Canal.

The water you mentioned in Pioneer No. 1 & 2 , Price water Co. and Allred Ditch is all in the Decree and it all goes in at the head of Price Canal. These above companies dont reconize Wellington Canal's claims but they have been very generous with their water.

I hope this will explain why these changes were made.

Very truly yours,

Harvey Thomas
